National Institute of Public Health is the responsible institution in charge of the surveillance of communicable diseases (early warning and response system, vaccine preventable disease and zoonotic infections). NIPH area of
The mandate defines the main functions of an organization and derives from outside and above an organization. Expertise activities: Epidemiology of communicable and non-communicable diseases, hygiene and environment, microbiology, public health activities, health education, statistics, informatics and health economics.

**SECTION 3**

Describe your unit position within the organizational chart (organigram) of the larger institution you belong to. A maximum of 200 words is allowed.

An organizational chart for an organization shows the units who make up such organization and the relationships between them. Relationships refer to authority and communication lines.

**SECTION 4**

Describe your unit's organizational chart (organigram). A maximum of 200 words is allowed.

An organizational chart for a unit shows the managers and main professional roles who make up such unit and the relationships between them.

**SECTION 5**

Illustrate the main roles and activities carried out by your organization in the field of infectious diseases prevention and control, specifically in the following areas:

1. **Surveillance of infectious diseases**
   - A maximum of 200 words is allowed

   **a)** This system is based on syndromic approach and clinical diagnosis. Surveillance system covers all Health Care levels. Regional IPH pass these forms to the Central NIPH. In Central IPH there is a database (Ko-Surv) based on EPI-INFO where data are regularly analysed. Reporting forms contents include two parts: Form 1 for aggregated data and Form 2 for individual information (annex). Our surveillance system is based on weekly report. Reporting forms include also case definition for each disease (common), to make easier clinical diagnose for GP. Zero reporting is mandatory. Reporting forms are translated in all minorities languages. The strategic planning of Surveillance System in Kosovo clearly describes tasks of the National Institute of Public Health and Regional Institutes of Public Health. Regional IPH are in charge of: performing daily visits to the clinic for Infectious Diseases with the aim of collecting data to record new hospitalised cases, detecting new cases, and providing information and implementing prevention measurements.

2. **Epidemic Intelligence**

   Within NIPH Epidemic Intelligence is organised in a surveillance and response unit (indicator-based component) for all types of epidemics, including chronic diseases and injuries. NIPH is National Focal Point for implementing International Health Regulations.

   Monitoring Services delivers are carried out by reports in health institutions of Kosovo. Supervisory visits are randomly carried out every 6 months in the regional NIPH, MFMC, and FMC. Control of the protocol is performed, whereas infectious diseases are registered.

   Surveillance of zoonoses is performed by the programme for infectious diseases surveillance. The follow up is done through weekly reports, while detailed analysis is done in quarterly reports. Prevention and control of the cases follow the clinical and laboratory confirmation. Research in the field is done by NIPH and Regional IPH which report to the NIPH.
c) Diagnostic services
A maximum of 200 words is allowed

NIPH through Department of Microbiology performs laboratory diagnosis of infectious diseases (bacterial, parasitic, virologic, serologic analysis)

f) Emergency preparedness
A maximum of 200 words is allowed

The Commission for Surveillance and Epidemiological Responsibility was established in August 1999 within the Department of Epidemiology. The Commission includes experts of IPH, WHO and organizes routine meetings aiming at following the epidemiological situation, carrying out planned activities as well as organizing training in order to increase surveillance. The Commission is composed of Epidemiologists, Microbiologists, Infectivologists, Human Ecologists, WHO representatives and other experts such as veterinaries, MoH representatives, sanitary inspectors, KFOR, TMK, etc. At regional and local level in case of epidemics the crisis stab is structured similarly. Professional Scientific Commission of the NIPH directed by the operative chief assigns missions and actions to prevent epidemics and take prophylactic preventive measurements. Regional and municipality authorities undertake activities to monitor specific diseases; as a matter of fact, IPH is responsible for surveillance. Protocols relating to case definition and prevention measurements have been refreshed with new data and distributed to the health workers in all municipalities.

g) Training and education
A maximum of 200 words is allowed

h) Research
A maximum of 200 words is allowed

SECTION 6
Describe the alert procedure adopted by your organization and the conditions to which applies paying special attention to infectious diseases.
A maximum of 200 words is allowed

The alert procedures in the Infectious Diseases Unit can be described as follows: Reporting of specific diseases assigned within 24 hours from all levels; daily visits in the Clinics for Infectious Diseases and Infectious Diseases Department of Regional hospitals; checking of the reported diseases by clinic or laboratory confirmation; research in the field when possible cases are suspected.

SECTION 7
Provide a brief account of your unit's professional staff mix

The categories are mutually exclusive: please, assign only one profile to each unit's professional staff.
